

AMENDMENTS TO THE SPECIFICATION

Please replace paragraph [0037] with the following amended paragraph:

[0037] As best illustrated in Figure 2A, an interface portion 312 of the 90 degree elbow fitting 308 extends from the flange 304 and is attached to the terminal element 302 so that a joint 314 is cooperatively defined by the fitting 308, specifically, the interface portion 312, and the terminal element 302. In this particular implementation, the interface portion 312 and terminal element 302 are configured and arranged so that when the cable assembly [[200]] 300 is operably mated with the receptacle 104, the joint 314 cooperatively defined by the fitting and the terminal element 302 resides within, or below the top of, the receptacle 104. The specific position and location of the joint 314 within the receptacle 104 may be varied as necessary to suit the requirements of a particular application.
